Customer Journey Map

This Customer Journey Map explains the user's experience while using the HDI Prediction System. It describes the user's actions, interactions, thoughts, and feelings from entering the input values to viewing the predicted HDI score and category.

Phase of Journey	Stage 1	Stage 2	Stage 3
Actions <i>What does the customer do?</i>	- Opens the HDI Prediction website. - Enters Life Expectancy, Mean Schooling, Expected Schooling, and GNI. - Checks that all values are entered correctly.	- Clicks the Predict button. - Waits for the machine learning model to process the data. - The system predicts the HDI score.	- Views the predicted HDI score. - Checks the Human Development category (Low, Medium, High, or Very High). - Uses the result for analysis or decision-making.
Touchpoint <i>What part of the service do they interact with?</i>	- Home page (<code>index.html</code>). - Input form fields. - Predict button.	- Flask application. - Machine learning model (<code>model.pkl</code>). - Prediction process.	- Result page (<code>result.html</code>). - Predicted HDI score. - Development category displayed.
Customer Thought <i>What is the customer thinking?</i>	- I hope I entered the correct values. - This application should be easy to use. - I want an accurate prediction.	- I hope the prediction is generated quickly. - The result should be reliable. - The system should not show any errors.	- Now I know the HDI score. - The category helps me understand the country's development level. - This saves time compared to manual calculation.

Customer Feeling <i>What is the customer feeling?</i>	• Interested • Curious • Hopeful	• Excited • Confident • Patient	• Happy. • Satisfied. • Confident in the result.
Process Ownership <i>Who is in the lead on this?</i>	• User	• Flask Application & Machine Learning Model	• Flask Application
Opportunities <i>How can we improve this stage?</i>	• Add input validation. • Provide example input values. • Improve form design.	• Display a loading indicator. • Improve prediction speed. • Handle invalid inputs more clearly.	• Show charts and graphs. • Provide suggestions based on the HDI category. • Allow users to download or save the prediction report.
