

Project Initialization and Planning Phase

Date	28 June 2024
Team ID	xxxxxx
Project Name	A Comprehensive Measure of Well Being
Maximum Marks	3 Marks

Define Problem Statement:

Human Development Index (HDI) prediction is essential for evaluating a country's overall development. Manual calculation of HDI using life expectancy, education, and income indicators is complex and time-consuming. There is a need for an automated system that can accurately predict the HDI score from these indicators. This project develops a Flask-based web application integrated with a machine learning model to provide fast and reliable HDI predictions. The system also classifies the predicted HDI into Low, Medium, High, or Very High Human Development, enabling informed decision-making.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A user who wants to predict the Human Development Index (HDI).	Predict the HDI category by entering Life Expectancy, Mean Schooling, Expected Schooling, and GNI values.	I do not know how different development indicators influence the HDI score and category.	Calculating HDI manually is complex, time-consuming, and requires mathematical formulas and data analysis.	Confident and satisfied because the Flask application instantly predicts the HDI score and classifies it into Low, Medium, High, or Very High Human Development accurately.
