

Problem-Solution Fit

Date	30 June 2026
Team ID	xxxxxx
Project Name	A Comprehensive Measure of Well-Being
Maximum Marks	5 Marks

Problem-Solution Fit Canvas:

The Problem–Solution Fit Canvas explains how the proposed Human Development Index (HDI) Prediction System solves the challenges of manual HDI analysis. It shows the target users, their problems, existing solutions, limitations, root causes, and how the Machine Learning-based Flask application provides quick and accurate HDI prediction.

1. CUSTOMER SEGMENT(S) • Government agencies • NGOs • Researchers • Students	6. CUSTOMER LIMITATIONS • Limited technical Knowledge • Limited data availability	5. AVAILABLE SOLUTIONS • UNDP reports • Manual spreadsheets Pros: Reliable Cons: Time-consuming
2. PROBLEMS / PAINS • Manual HDI calculation • Slow analysis • Difficult comparison	9. ROOT CAUSE HDI computation requires multiple indicators and calculations, making manual prediction difficult	7. BEHAVIOR • Searches online • Uses datasets

3. TRIGGERS TO ACT • Need fast HDI prediction • Better planning	10. YOUR SOLUTION Machine Learning Flask application that predicts Human Development Index using Life Expectancy, Mean Schooling, Expected Schooling and GNI. Returns HDI score and development category.	8. CHANNELS Online: Flask Web App Offline: Reports
4. EMOTIONS Before: Uncertain After: Confident
