Empathy Map

This empathy map helps us understand the users of the HDI Prediction System and their needs. It shows what users say, think, do, and feel while predicting the Human Development Index using Life Expectancy, Education, and GNI. This helps us build a simple, accurate, and user-friendly Flask-based application.

SAYS • I want to know the HDI of country • I need quick and correct results. • I don't want to calculate it by myself.	THINKS • Manual calculation is difficult. • This application should be easy to use. • I hope the result is accurate.
PERSONA NAME: Student <i>Role:</i> prediction of Human Development Index (HDI).	
DOES • Enters Life Expectancy, Mean Schooling, Expected Schooling, and GNI. • Clicks the Predict button. • Checks the HDI score and category.	FEELS • Happy because the result comes quickly. • Confident because the prediction is accurate. • Satisfied because it saves time.
